

As a commercial truckdriver I appreciate the ability to obtain traffic and weather conditions for cities that I am enroute to. With xm radio I can get this information before I arrive at any of the cities that xm radio provides this information. With AM or FM radio I would have to wait until I am almost in these cities before I can get this information. By then I could be tied up in a weather or traffic situation that could have been avoided with the proper advanced notice. This can make the difference in making my deliveries on time or not. xm radio provides a very valuable service. Thank you,
Tommy Ackerman
